3 Things I Absolutely Should Know Today

Abacus.AI Smaug Models Launch for Enterprise Agentic AI - Abacus.AI released three open-weight Smaug models (Agentic, Flash, Mini) on September 10, 2026, designed for enterprise agentic AI workloads. The models are available on Hugging Face and through the RouteLLM API, emphasizing data privacy through VPC deployment. **Why you should care:** As a Diploma IT student, these open-weight models give you practical experience with enterprise-grade agentic AI systems that can run in your own cloud environment, reducing dependency on closed APIs and offering cost savings of 15-20% per agent. **Impact:** High. **What to do:** Experiment with Smaug Mini on Hugging Face to understand open-weight model deployment patterns. **Source:** Unite.AI, HPCWire

Critical VMware vCenter Flaw Actively Exploited in the Wild - CVE-2026-59310, a critical directory traversal flaw with a 9.8 CVSS score in VMware vCenter, has been under active exploitation by a single threat actor since public disclosure on July 29, 2026. Attackers with network access can remotely execute arbitrary code. **Why you should care:** VMware vCenter is widely used in enterprise infrastructure; understanding this exploitation pattern helps you grasp real-world vulnerability chains and the urgency of patch management in production environments. **Impact:** Critical. **What to do:** Review your organization's patch timeline for VMware components and prioritize CVE-2026-59310 if applicable. **Source:** Dark Reading

IndiaAI Mission Establishes Shared Compute Facility with 45,000 GPUs - The IndiaAI Mission, with an outlay of over Rs. 10,372 crore, has set up a shared compute facility housing 45,000 GPUs for national-scale AI research and deployment. Under the foundation model pillar, 15+ large and small language models are being supported across speech, text, and vision modalities, and the AI Kosh platform now hosts over 12,000 datasets. **Why you should care:** As an IT student in India, this infrastructure directly lowers the barrier to hands-on AI work-you can access substantial compute resources through sanctioned channels rather than relying on personal hardware or unverified cloud credits. **Impact:** High. **What to do:** Check the IndiaAI Mission portal for GPU allocation eligibility and dataset access for your projects. **Source:** TechObserver.in
