3 Things I Absolutely Should Know Today

CERT-In Chrome vulnerability warning: India's Computer Emergency Response Team flagged critical security flaws in Google Chrome across Windows, macOS, and Linux that could allow remote system compromise. **Why you should care:** As a Diploma IT student, you'll likely use Chrome for development and research; unpatched systems expose your work and data to attack. **Impact:** High. **What to do:** Update Chrome immediately via the browser's built-in update mechanism. **Source:** Business Standard

DeepSeek V4 API price cut: DeepSeek reduced Pro API pricing by 75%, making high-tier coding assistant capabilities more accessible for Indian developers. **Why you should care:** Dramatically lowers cost barrier for accessing advanced AI coding tools in your projects and coursework. **Impact:** Medium. **What to do:** Evaluate DeepSeek V4 for your coding assistant needs; check API documentation for integration. **Source:** GetInfoToYou

IBM-Arm strategic collaboration: IBM announced partnership with Arm to develop new dual-architecture hardware for enterprise AI and data workloads. **Why you should care:** Signals future direction of enterprise hardware you'll encounter in internships and jobs; understanding these architectures gives you career advantage. **Impact:** Medium. **What to do:** Research dual-architecture computing trends; note how this affects cloud instance choices. **Source:** IBM Newsroom
